

Ujucode-bot

Welcome to Ujucode-bot, a collaborative project developed during the internship at Ujucode. This bot serves as an email accessor, allowing access to emails for further natural language processing (NLP) capabilities. Although the NLP concept has not been implemented, the bot focuses on email-related tasks. Here's a quick overview:

Project Overview

Objective: Email accessor bot developed as part of the internship at Ujucode.

Key Features:

- Access emails for further processing.
- Developed collaboratively during the internship.

Subject Matter Expert (SME) in Python during the development.

Files:

- Project files from the collaborative internship.

Getting Started

1. Clone the repository:

```
bash git clone https://github.com/vijaytakbhate2002/Ujucode-bot.git
```

1. Explore the project files and structure developed during the Ujucode internship.

Contributing

As this project was developed collaboratively during the internship, further contributions may not be applicable. However, if there are specific improvements or extensions, feel free to discuss them with the Ujucode team.

License

This project is subject to the license agreements of the Ujucode internship.
